## Routine

To avoid disturbances and minimize downtime it's important that the terminal is maintained on a regular basis. Beyond the recommendations given in the implementation guide we also recommend that:

- The terminal is cleaned externally by a microfiber cloth every second day.
- The terminal chip and magnetic card reader are cleaned with compressed air and specially dedicated cleaning cards every second week, more frequent if the environment requires it.

Observe that cleaning with any detergent is prohibited.  
Dedicated cleaning cards is available for purchase. Contact your reseller for more information.
